Response to Arguments

Applicant's arguments filed 11/17/2008 have been fully considered but they are not persuasive. Applicant argues "...the trademark/trade name Java TM clearly limits the scope of the present claims" and is the same phrase as "Java compliant virtual Machine". Examiner, during the interview on January 12, 2009 directed the Applicant attention to MPEP 2173.05 and requested to amend the claims to overcome 35 USC 112 second paragraph rejection, as directed in previous office action. Applicant agreed to Examiner's suggested amendment and Examiner hereby withdraws the rejection.

Allowable Subject Matter

Claims 1, 3, 6, 8 – 10, 15 – 18 and 22 are allowed and renumbered as 1 – 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tarek N. Fahmi, Registration number 41,402 on January 12, 2009.

IN THE CLAIMS:

6. (Amended) A computing environment as recited in claim 1, wherein said computing environment is a Java™ compliant computing environment, and wherein said first and second applications are Java™ compliant applets.

8. (Amended) A computing environment as recited in claim 1, wherein said computing environment is a Java™ compliant computing environment, and wherein said first firewall control block is implemented as in the run time environment.

9. (Amended) A mobile computing device, comprising:
an operating system; a Java™ compliant virtual machine operating on said operating system;

a first Java™ compliant applet operating on said Java™ compliant virtual machine;
a Java™ compliant applet operating on said virtual machine Java™ compliant virtual machine; and

a first firewall control block, wherein said first firewall control block defines access privileges of said first Java™ compliant applet with respect to at least one other Java™ compliant applet operating on said Java™ compliant virtual machine, and further defines the access privileges of said at least one other Java™ compliant applet Java™ compliant applet with respect to said first Java™ compliant applet; and

a second firewall control block, wherein said second firewall control block defines access privileges of said at least one other Java™ compliant applet with respect to the first Java™ compliant virtual machine, and further defines the access privileges of said first Java™ compliant applet with respect to said at least one other Java™ compliant applet,

wherein said first firewall control block and said second firewall control block each includes a firewall control value and a firewall control indicator, the firewall control value including an application identifier data having a resource identifier and a proprietary identifier extension, the firewall control indicator being an indicator value represented by one or more bytes that indicate how the firewall control value should be interpreted with respect to access privileges of other JavaTM compliant applets, and

wherein when said firewall control indicator of said first firewall control block has a first indicator value, said first firewall control block compares said proprietary identifier extension of said first firewall control block to said proprietary identifier extension of said second firewall control block, and when said firewall control indicator has a second indicator value, said first firewall control block compares said proprietary identifier extension and resource identifier of said first firewall control block to said proprietary identifier extension and resource identifier of said second firewall control block.

10. (Amended) A mobile computing device as recited in claim 9, wherein said mobile device is a JavaTM compliant smart card.

15. (Amended) A mobile computing device as recited in claim 10, wherein for a firewall control block is defined by for every JavaTM compliant applet.

16. (Amended) A method of providing security for a Java compliant computing environment that includes a JavaTM virtual machine and a plurality of JavaTM compliant applets that operate on said JavaTM virtual machine, said method comprising:

receiving a request from a first Java™ compliant applet operating on a Java™ virtual machine to access a second Java™ compliant applet, the first Java™ compliant applet having a first firewall control block associated with it and the second Java™ compliant applet having a second firewall control block associated with it;

reading the second firewall control block associated with said second Java™ compliant applet, said first firewall control block and said second firewall control block each including a firewall control value and a firewall control indicator, the firewall control value including an application identifier data having a resource identifier and a proprietary identifier extension, the firewall control indicator being an indicator value represented by one or more bytes that indicate how the firewall control value should be interpreted with respect to access privileges of the respective first or second Java™ compliant applet;

determining, based on said second firewall control block, whether said first Java™ compliant applet should be allowed to access said second Java™ compliant applet by determining whether said firewall control value of said second firewall control block has a first indicator value or a second indicator value, wherein

wherein said first firewall control block and said second firewall control block has a first indicator value, said second firewall control block compares said proprietary identifier extension of said first firewall control block to said proprietary identifier extension of said second firewall control block, and

wherein said firewall control indicator of said second firewall control block has a second indicator value, said second firewall control block compares said proprietary identifier extension and resource identifier of said first firewall control block to said first firewall control block to said proprietary identifier extension and resource identifier of said second firewall control block; and

allowing said first Java™ compliant applet to access said second Java™ compliant applet when said determining determines that access should be allowed.

17 (Amended) A method as recited in claim 16, wherein said method further comprises:

Providing a reference to said first Java™ compliant applet with a reference to said second Java™ compliant applet when said determining determines that access should be allowed.

18. (Amended) A method as recited in claim 16, wherein said providing of a reference comprises:

Invoking a first method that is implemented as a part of Java™ management environment or Java™ system environment; and

Invoking a second method that is implemented as a Applet class, as a result of said invoking of the second method.
